Dialpad Agent Operations & Call Handling Guidelines

Dialpad is an AI-native customer communications platform that helps businesses manage customer interactions across calls and digital channels while improving efficiency, automation, and customer experience.

This guide provides standardized procedures and operational guidelines for all Dialpad agents to ensure proper call handling, system readiness, campaign accuracy, and professional customer communication.

Pre-Shift Preparation

1. Log in to Dialpad

- Open Google Chrome.
- Go to the Dialpad login page.
- Enter your company-approved email address.
- Click Continue or Log In.
- Complete any required verification or single sign-on step.
- Once logged in, confirm that you are using the correct Dialpad account.
- Check that your assigned contact centers or campaigns are visible on the left-side panel.

2. Headset Set-up

- Use a working wired or approved company headset.
- Connect the headset securely to your computer.
- Make sure the headset is not muted.
- Avoid using laptop speakers, Bluetooth earbuds, or phone audio unless approved.
- Position the microphone close enough to your mouth, but not directly touching it.
- Ensure you are in a quiet workspace with minimal background noise.

3. Allow Browser Audio Permissions

- In Chrome, check the browser permission icon beside the website address.
- Make sure Dialpad is allowed to use:
    1. Microphone
    2. Speaker/Audio
    3. Notifications
- If permissions are blocked, change them to Allow.
- Refresh Dialpad after updating permissions.

4. Test Audio and Microphone in Dialpad

- In Dialpad, go to your **Settings**.
- Open the **Audio / Microphone / Speaker** settings.
- Select your headset as the active **Microphone**.
- Select your headset as the active **Speaker**.
- Speak normally and check if the microphone input moves or detects sound.
- Play a test sound, if available, to confirm you can hear audio clearly.
- Adjust your computer volume if needed.

5. Confirm Call Readiness

Before taking calls, verify:

- You can hear audio clearly.
- Your microphone detects your voice.
- Your headset is selected in Dialpad.
- Chrome permissions are allowed.
- Notifications are enabled.
- You are logged in to the correct Dialpad account.
- You are ready to set your status to **Available / Active**.

Audio/Mic Troubleshooting

If audio or microphone is not working:

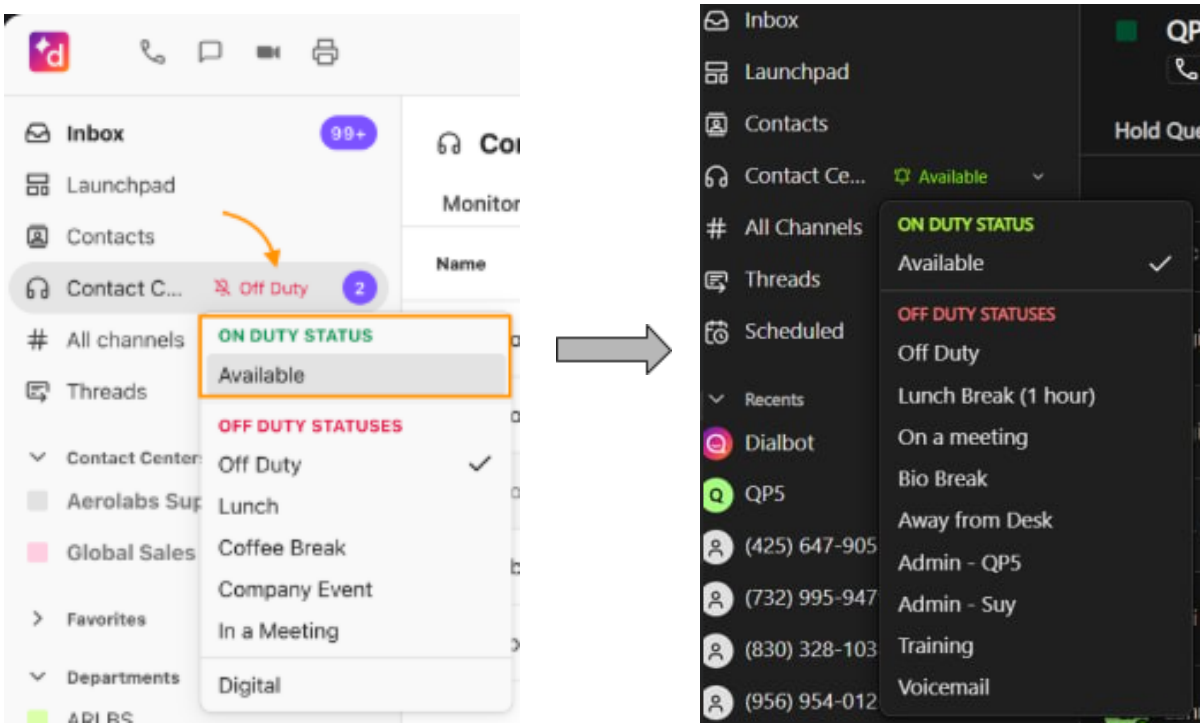

1. Unplug and reconnect the headset.
2. Refresh Dialpad.
3. Check Chrome microphone permissions.
4. Confirm the correct headset is selected.
5. Close other apps using the microphone.
6. Restart Chrome.

7. Restart the computer if the issue continues.
8. Report the issue to your supervisor or IT support if unresolved.

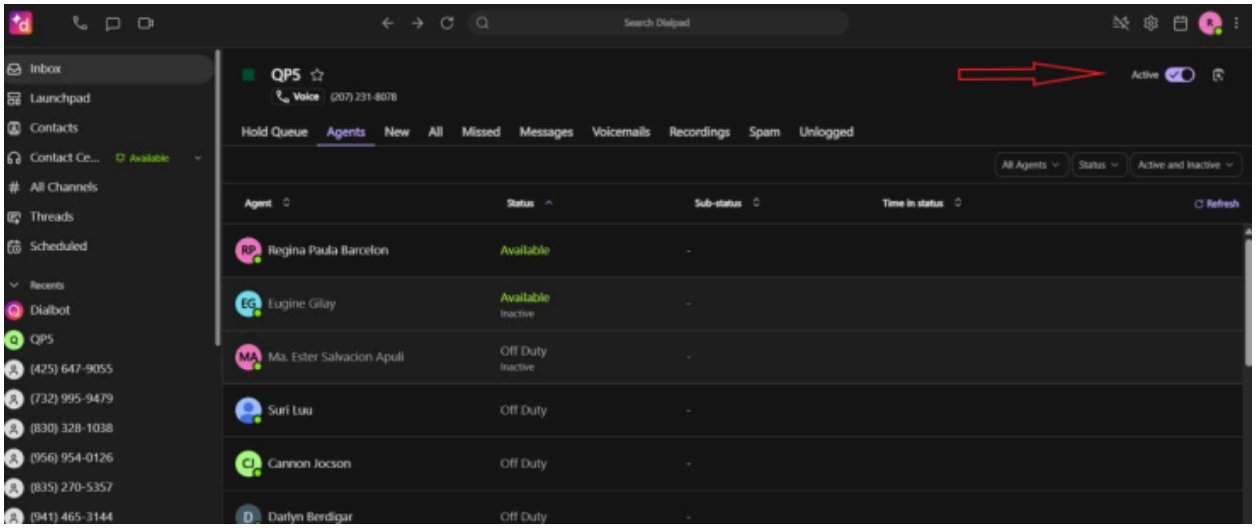

Begin your shift

To receive calls, you'll need to go on duty by adjusting your availability status to Available and setting your on duty status to Active.

1. Beside Contact Centers, select **Off Duty**
2. Select **Available**

3. Next, it's time to set yourself to Active.
4. Select the Contact Center from the sidebar, then toggle on the **Active** slider.

---

1. Agent Status

Dialpad provides two types of agent availability controls that help administrators monitor team activity and ensure agents are only receiving calls when they are ready.

Availability settings apply across all shared lines, while the **Active State setting** is specific to each individual line.

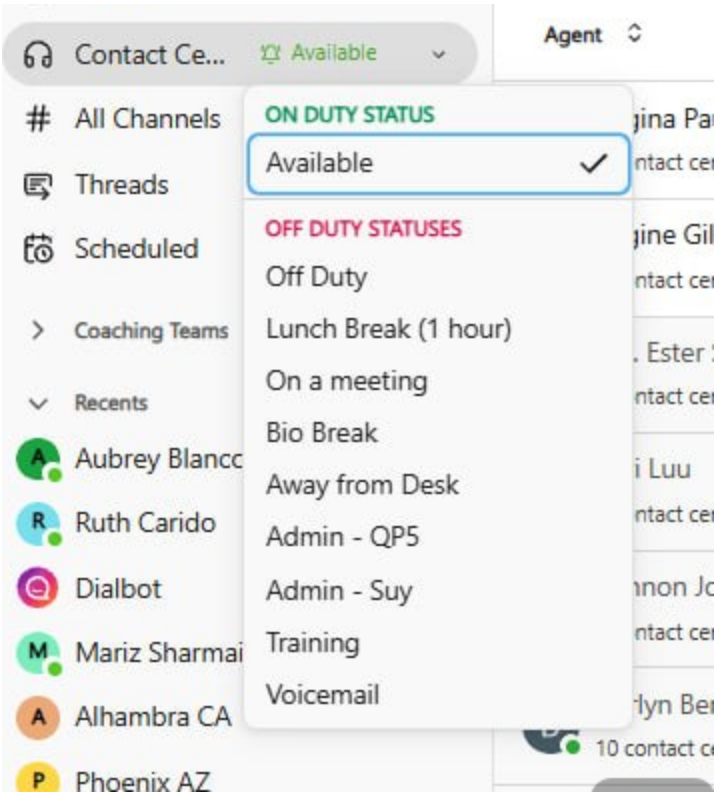

- Available

This setting determines whether an agent is eligible to receive calls from any Contact Center or Department they are assigned to.

It has two options:

- **On Duty**
- **Off Duty**

When set to **On Duty**, the agent is available to receive calls. When set to **Off Duty**, the agent will not receive incoming calls.

Agents can set themselves on and off duty, as well as have their availability settings changed by Dialpad automatically, or by their admin.

If an agent is in an off-duty state, they cannot receive a Contact Center call until they return on duty.

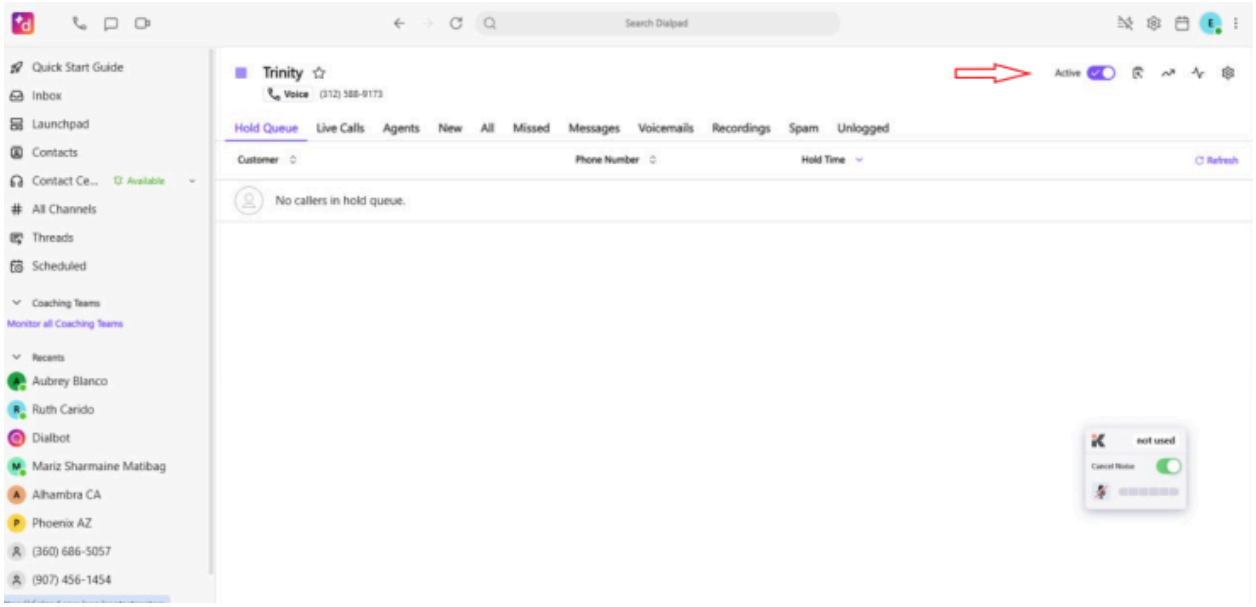

Agents are automatically set to an off-duty state when they reject or miss a call.

- Active state

Agents must set themselves as **Active** to receive a call or interaction from their assigned Contact Center or Department.

For example, if Eugine is assigned to 5 different Contact Centers (Campaign) and has set himself as On-Duty/Available, but only turned on the Active state for 3 Contact Centers, he will only receive calls for the 3 Contact Centers (Campaign) that he is active in.

Active state settings must be managed for each shared line. To set the Active state, select the Contact Center from the sidebar, then toggle the Active slider on or off.

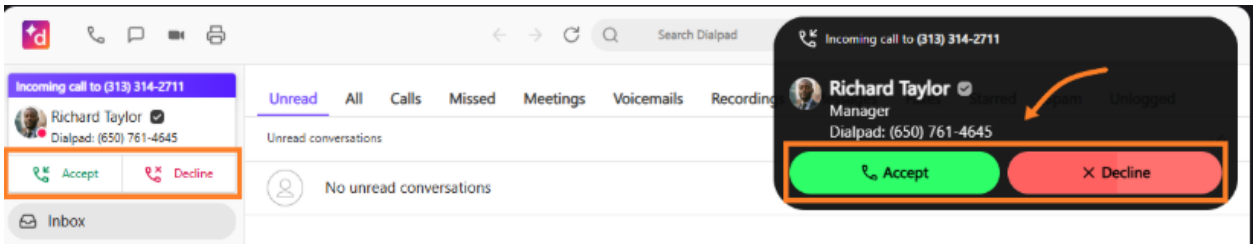

---

2. Answer a call (Call should be answered within 3-5 secs)

1. When an incoming call is coming in, a call notification will appear and sound across all of the selected Dialpad-connected devices.

2. **Accept** the call with a tap or a click, and you're connected. That's it!

Agents cannot change their availability status while the phone is ringing or during an active call. Availability status can only be modified once the call has ended.

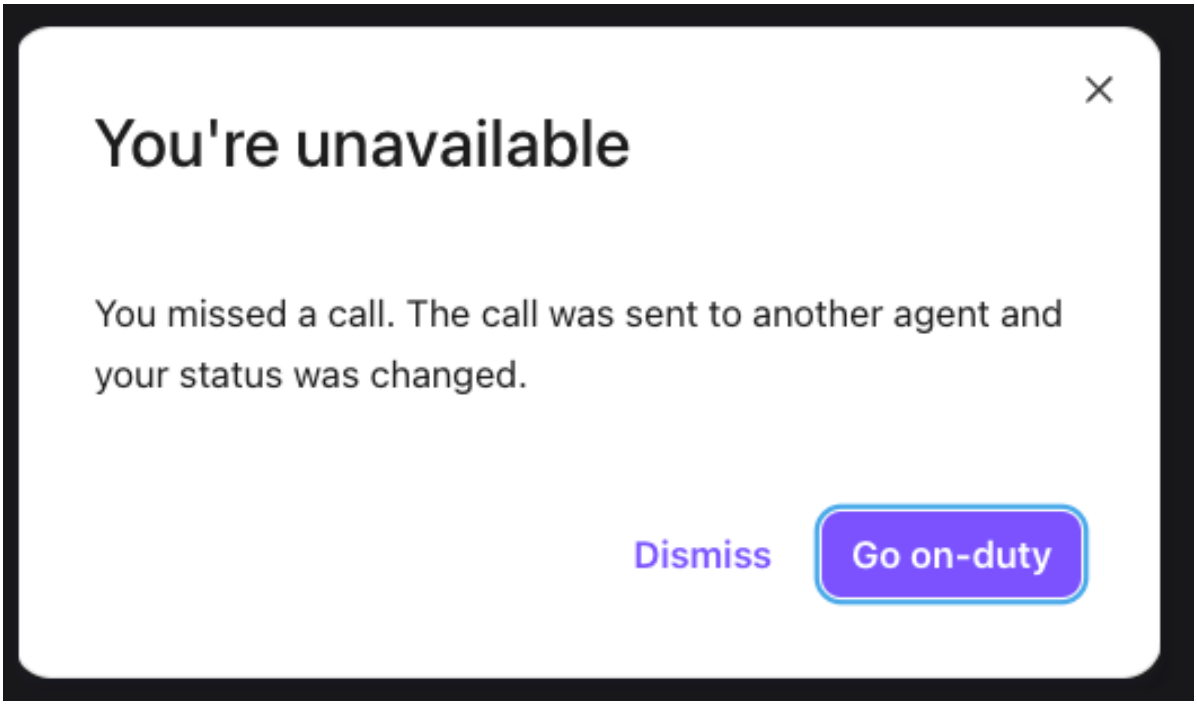

If a call is not answered within 3–5 seconds, it will automatically route to voicemail or be redirected to another available agent.

---

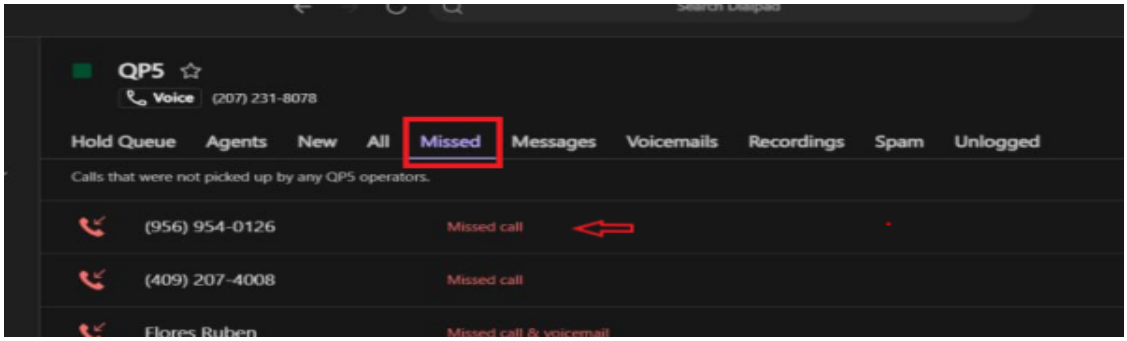

3. Missed calls

When you missed a call twice, Dialpad automatically sets your availability status to off-duty.

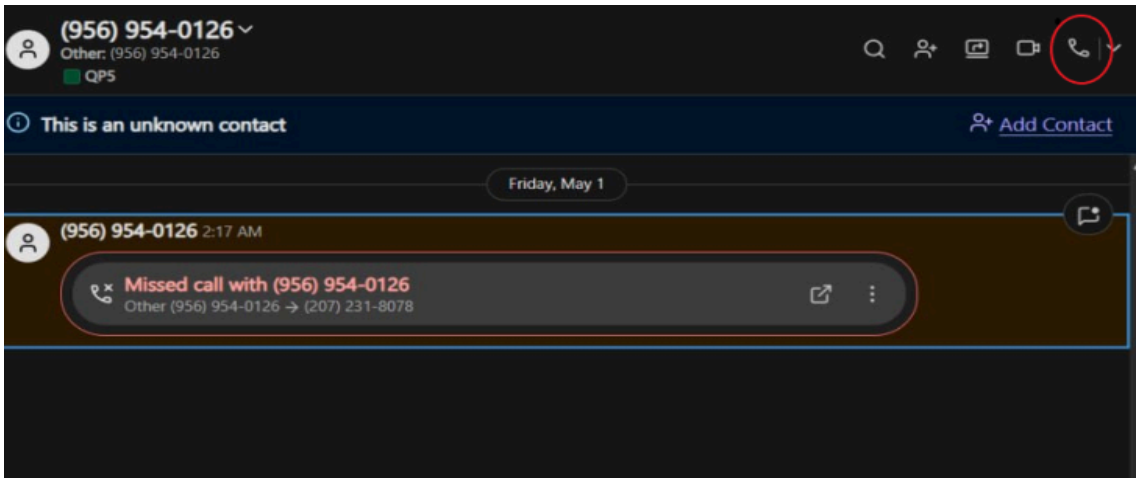

We'll alert you via pop-up and push notification, so you can decide whether to stay in that state or return to Available.

How to callback customers for missed calls?

Then, to return a missed call, click the **phone icon** beside the customer's information to initiate the callback.

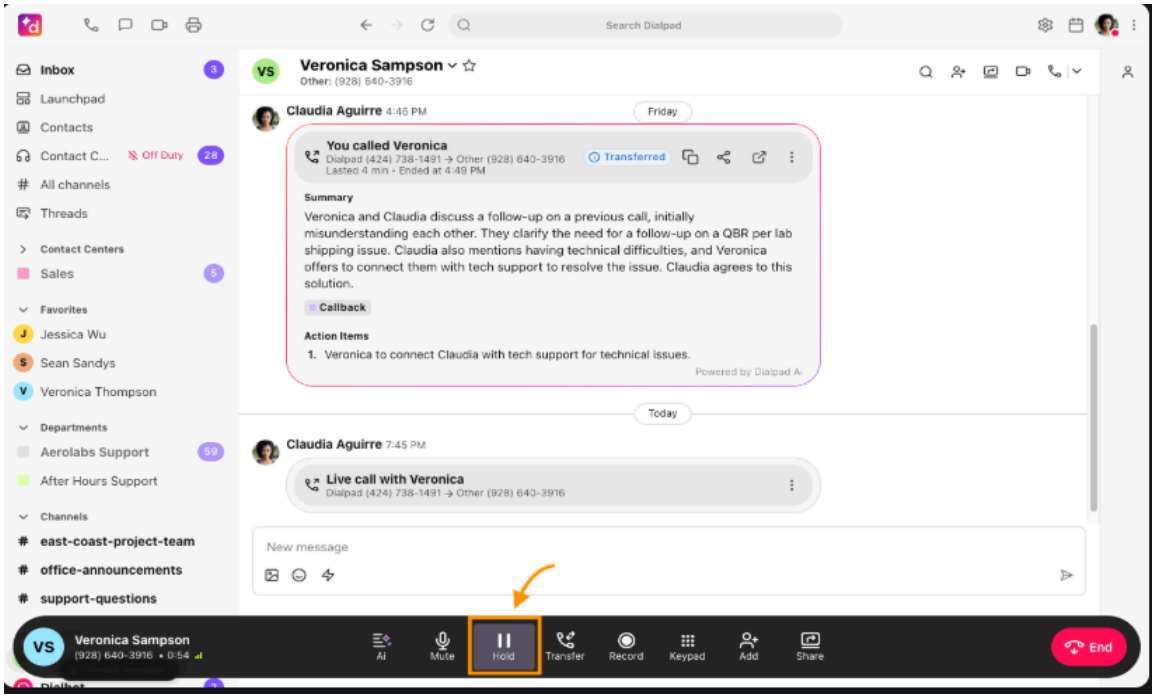

---

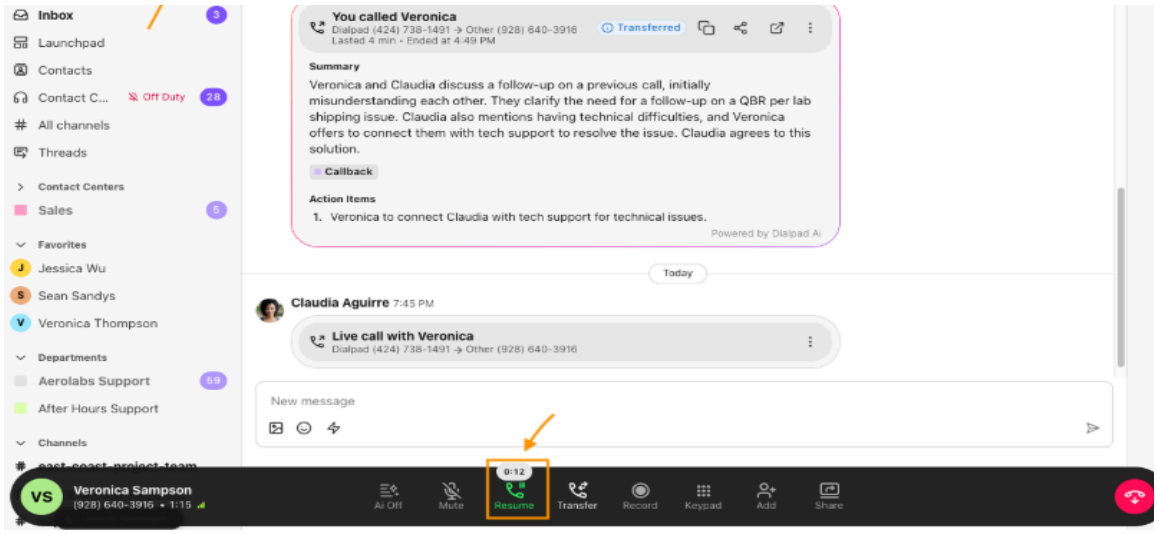

4. Place a call on hold

Place a call on hold to mute both you and the caller, callers will hear your Main Line's hold music while they're on hold.

1. From an active call, select **Hold.**

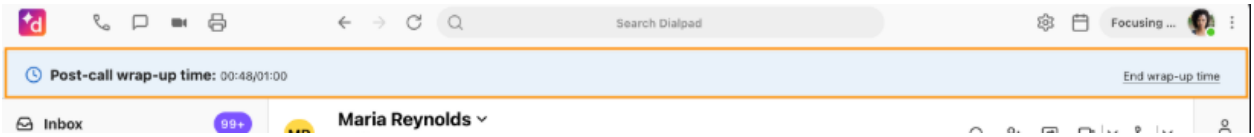

2. Select **Resume** to take the caller off hold and resume the call.

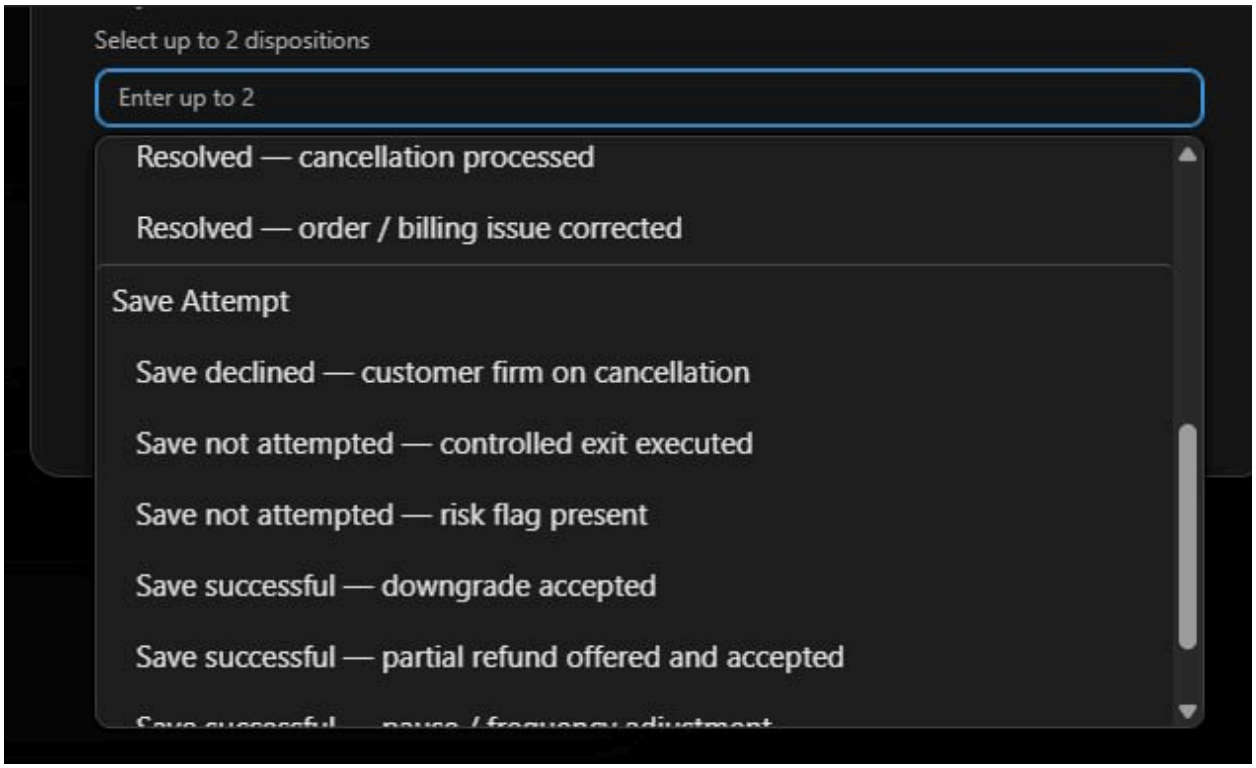

5. Wrap-up time

Wrap-up time is the period between the end of an agent's last call and an open opportunity to receive a new call, think of it as a moment to breathe and jot down any additional notes.

When you're in the post-call wrap-up period, you'll see the banner at the top of your screen.

Once you've entered the details in the wrap-up window, the banner will disappear, and you can enter your **Call Dispositions.**

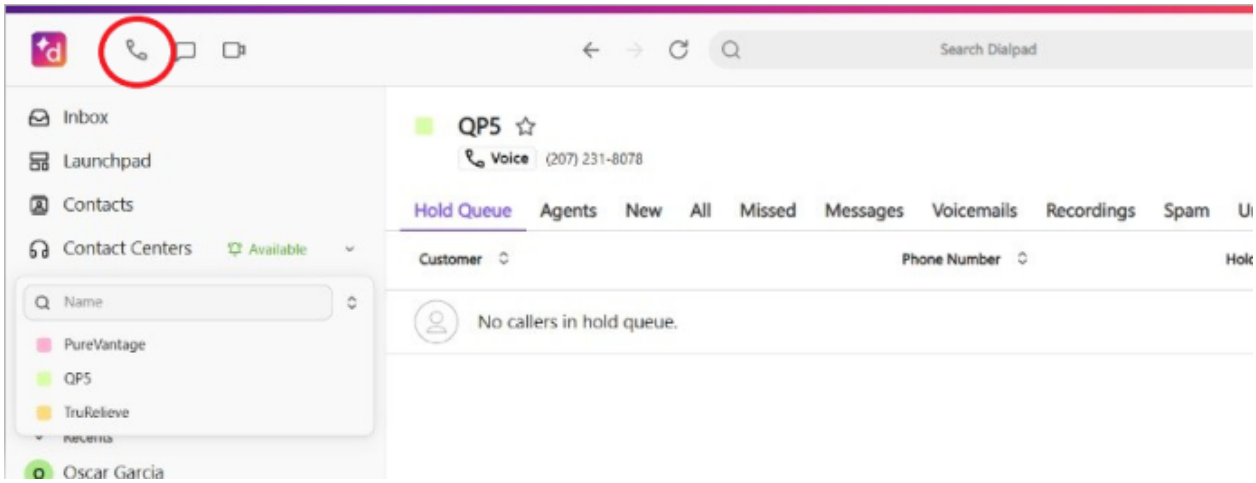

6. Dialpad Disposition Usage Guide:

Disposition	Usage Guideline
General Inquiry / Information Provided	Use when the customer is asking for general questions and the agent was able to provide the needed information without requiring further action or follow-up.
No Answer / Voicemail	Use when the call is not answered and it goes to voicemail, and a message is successfully left.
No Answer / VM not available	Use when the call is not answered and there is no voicemail option available or the call ends before a message can be left.
Resolved – Cancellation Request	Use when the customer requests cancellation and the issue is fully addressed and confirmed during the call.
Resolved – Escalation Required	Use when the concern has been resolved by creating or initiating an escalation (e.g., ticket, supervisor review, or higher-tier support).
Resolved – Refund Requested	Use when the refund request has been properly processed, submitted, or confirmed as resolved during the interaction.
Resolved – Shipment / Order Tracking	Use when the customer's concern about shipment or order status has been successfully addressed with tracking or delivery information.
Resolved – Subscription / Billing Issue	Use when subscription or billing concerns are clarified and resolved (e.g., charges explained, subscription updated, or billing issue corrected).
Spam / Ghost Calls	Use when the call is clearly spam, silent, abandoned immediately, or there is no genuine customer interaction.
Unable to Locate the Account	Use when the agent cannot find the customer's account despite reasonable verification attempts (e.g., missing or incorrect details).
Others	Use when subscription or billing concerns have been addressed and resolved, such as clarified charges, updated subscriptions, or corrected billing issues.

7. How to place a call from the main dialer?

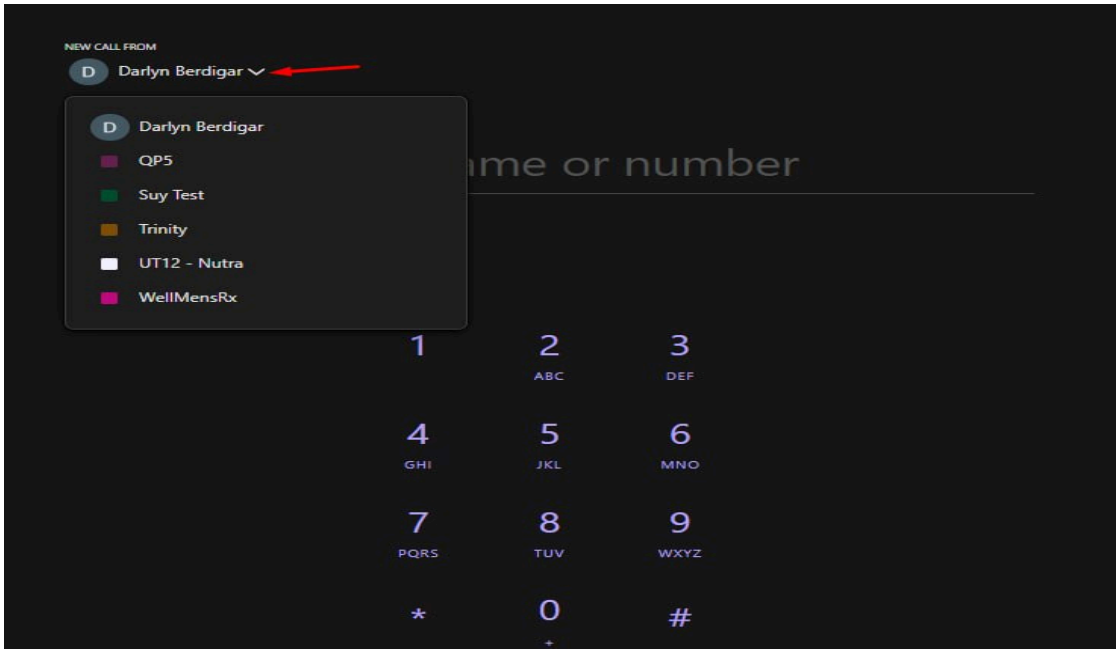

(This action applies exclusively to outbound agents.)

1. Select the **Phone icon**

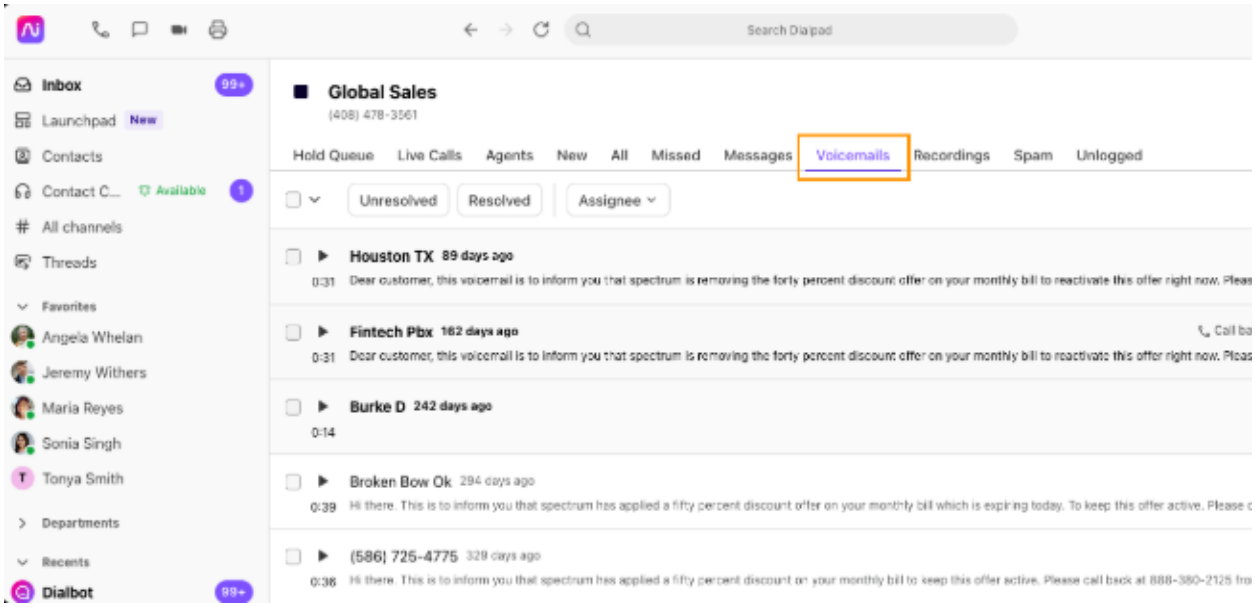

2. Enter a phone number

Make sure to choose the correct campaign:

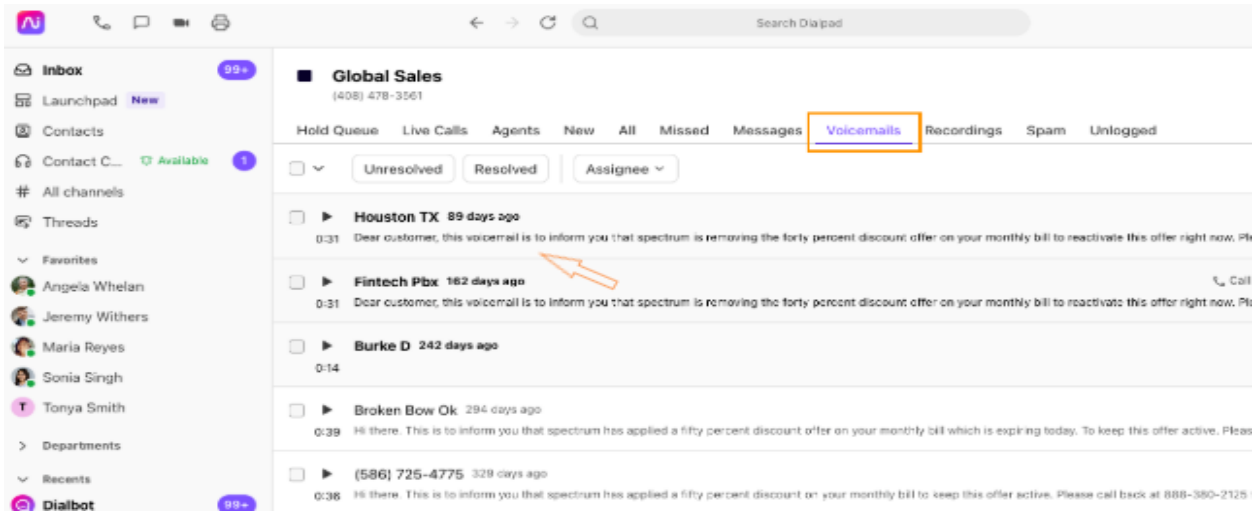

8. How to handle Voicemail?

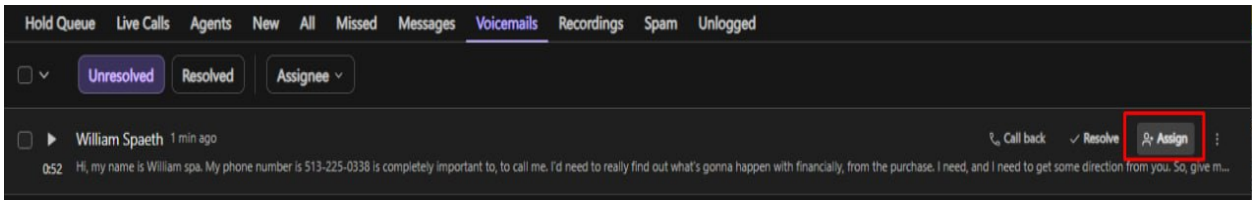

1. Select **Voicemail**

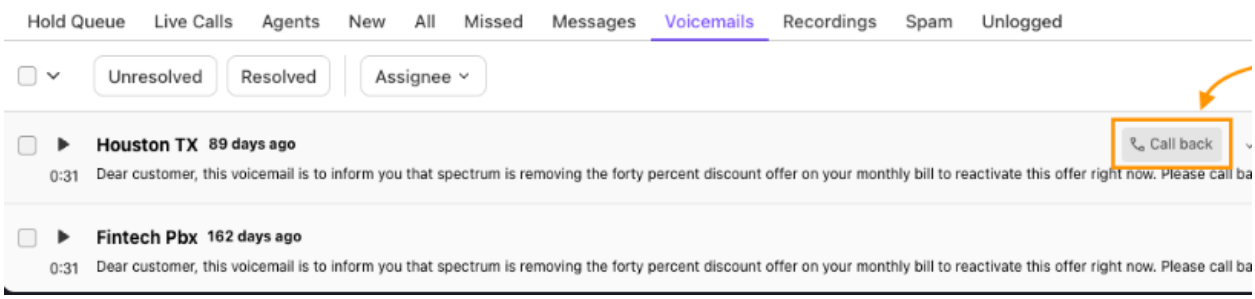

2. Choose the voicemail to be handled

3. Assign your name so others know it's being handled

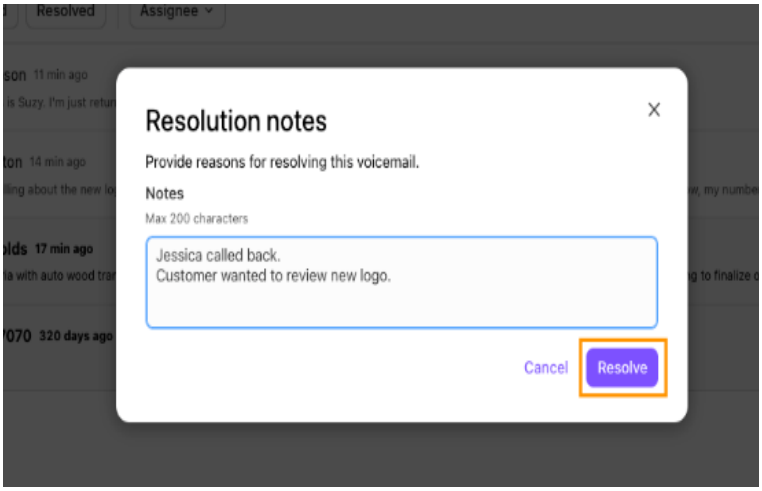

4. Select **Callback**

Or

5. Enter the resolution notes

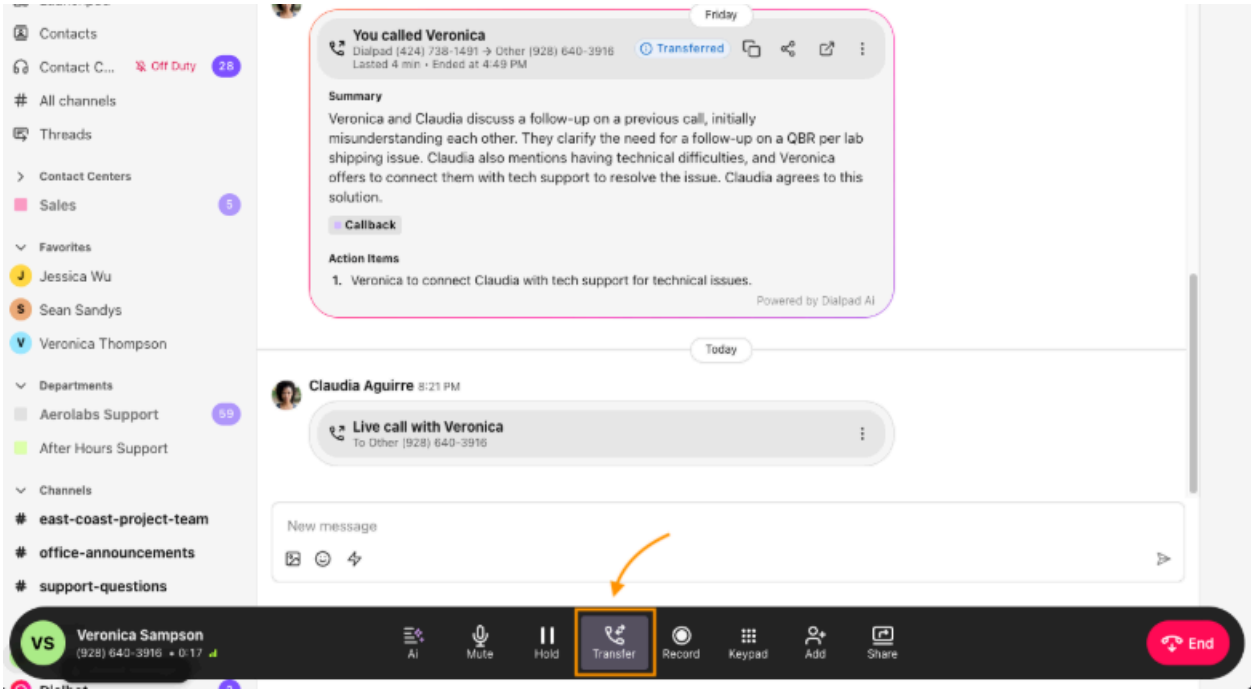

6. Then Select **Resolve**

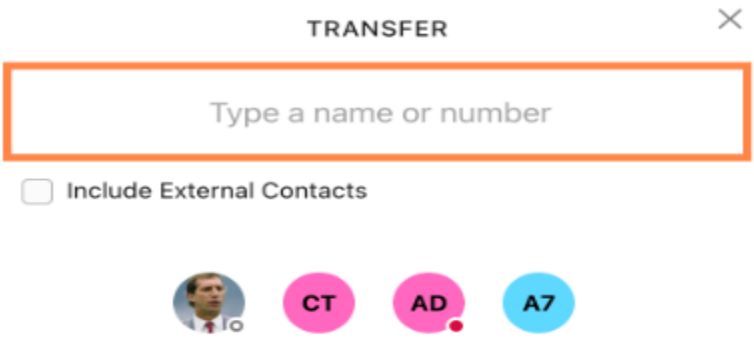

---

9. How to transfer a call to a supervisor?

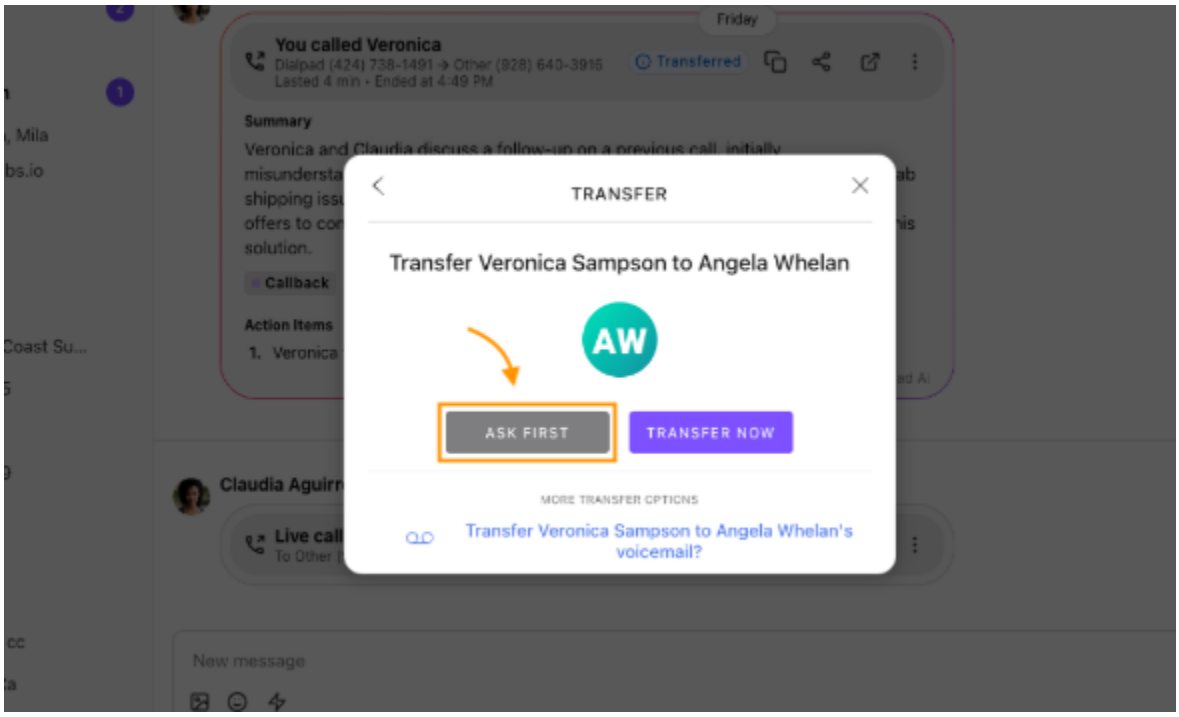

1. Select **Transfer**

2. Search for the contact/shared line

3. Select "**Ask First**"

4. The caller will be put on hold while you speak to the person you're transferring the call to

5. When you're ready to send the caller to your team member, select the **Transfer** button again.

🚨**Reminder:** *Always conduct a **warm transfer** for supervisor calls by briefing the receiving party before connecting the customer.*
